Responsive Dropdown Menu Bar using HTML & CSS

By **CodingNepal** · April 25, 2020

🗨️ 44

Hey friends, today in this blog you'll learn how to create a Responsive Dropdown Menu Bar or Dropdown Menu using HTML and CSS only. In the earlier blog, I have shared [how to create Sidebar Menu using HTML & CSS only](#) and now it's time to create a responsive dropdown menu.

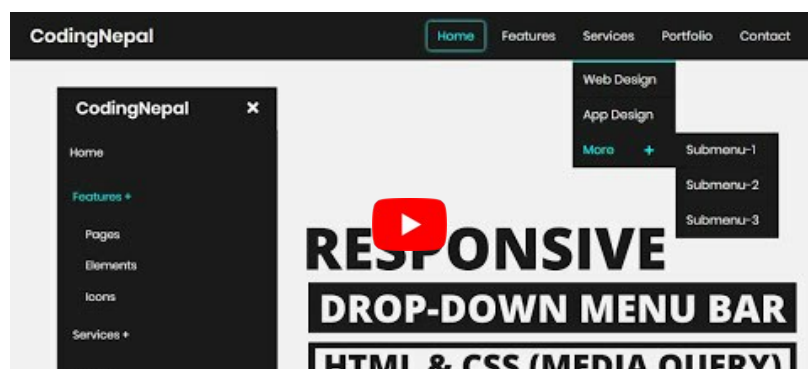

I'm sure that you know what is the dropdown menu and you may have seen it on different websites. A dropdown menu is a list of links or items that appears whenever the user clicks or hovers on it. Nowadays every website has a responsive navbar with a dropdown because with the help of dropdown we can easily organize listing by category and it is compulsory now for every website for the user conveniences.

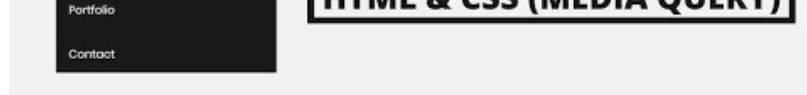

In our Responsive Dropdown Menu Bar, as you can see in the preview image, there is a horizontal navbar with a dropdown. At first, the drop menu or submenu are hidden but when you hover on the particular nav link then the dropdown menu appears on the hovered link. There is visible a pretty cool box-shadow effect when you hover on the particular nav link.

This is a fully responsive navbar with a dropdown menu and it is created using only HTML & CSS. On the pc, this navbar is displayed horizontally but on mobile devices, this dropdown or navbar displayed vertically like a mobile menu. On mobile devices, you have to click on the nav link to show the dropdown menu but on pc, you have to hover.

If you're feeling difficulty understanding what I am saying. You can watch a full video tutorial on this Responsive Dropdown Menu Bar.

Video Tutorial of Responsive Dropdown Menu Bar

In the video, you have seen the fully responsive dropdown menu and how it looks on mobile devices. I hope you have understood the codes behind creating this CSS dropdown menu. If you're a beginner in web design and you only know basic HTML & CSS then you can also create this type of navbar or dropdown menu bar.

If you like this dropdown menu and to get the source codes then you can easily copy the codes of this dropdown from the given copy boxes or you can also download the source code files of this dropdown from the given download button and I also recommend you download the code files of this Responsive Dropdown Menu Bar tutorial instead of copy codes.

Responsive Dropdown Menu Bar [Source Codes]

To create this dropdown menu css. First, you need to create two Files one HTML File and another one is CSS File. After creating these files just paste the following codes into your file. You can also download the source code files of this dropdown menu css design from the below download button.

First, create an HTML file with the name of index.html and paste the given codes in your HTML file. Remember, you've to create a file with .html extension.

```
<!DOCTYPE html>
<!-- Created By CodingNepal - www.codingnepalweb.com -->
<html lang="en" dir="ltr">
  <head>
    <meta charset="utf-8">
    <title>Responsive Drop-down Menu Bar</title>
    <link rel="stylesheet" href="style.css">
    <script src="https://code.jquery.com/jquery-3.5.0.js"></script>
    <link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/font-awesome/5.15.1/css/all.min.css">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
  </head>
  <body>
    <nav>
      <div class="logo">
        CodingNepal
      </div>
      <label for="btn" class="icon">
        <span class="fa fa-bars"></span>
      </label>
      <input type="checkbox" id="btn">
      <ul>
        <li><a href="#">Home</a></li>
        <li><a href="#">About</a></li>
        <li><a href="#">Services</a></li>
        <li><a href="#">Portfolio</a></li>
        <li><a href="#">Contact</a></li>
      </ul>
    </nav>
  </body>
</html>
```

Second, create a CSS file with the name of style.css and paste the given codes in your CSS file. Remember, you've to create a file with .css extension.

```
*{
  padding: 0;
  margin: 0;
  text-decoration: none;
  list-style: none;
  box-sizing: border-box;
}
body{
  font-family: montserrat;
}
nav{
  background: #0082e6;
  height: 80px;
  width: 100%;
}
label.logo{
  color: white;
  font-size: 35px;
  line-height: 80px;
  padding: 0 100px;
  font-weight: bold;
}
label.icon{
  color: white;
  font-size: 20px;
  line-height: 80px;
  padding: 0 10px;
}
input{
  display: none;
}
ul{
  position: absolute;
  top: 80px;
  left: 0;
  width: 100%;
  background: #0082e6;
  padding: 10px 0;
  text-align: center;
}
li{
  padding: 5px 0;
}
a{
  color: white;
  text-decoration: none;
}
```

That's all, now you've successfully created a Responsive Dropdown Menu using HTML CSS & JavaScript. If your code doesn't work or you've faced any error/problem then please download the source code files from the given download button. It's free and a .zip file will be downloaded then you've to extract it.

when i go to live server after write my code they told me

Cannot GET

/Side%20Navigation%20Menu%20Bar%20in%20HTML%20CSS%20%5E&%20JavaScript/index.html

what is it mean ??

Hey,

very nice Design.

I can change the Design like i want.

But when I want to open the Website on my phone or on a smaller Web Version.

The Design is the old...

Can anyone help me?

Reply

CodingNepal June 8, 2020 At 4:39 pm

first you need to install atom live server package then start it form you editor setting.

I am having a issue with all my Li tag elements on the rest of my webpage outside of the navigation disappearing when minimizing the screen. How can I fix this?

Reply

CodingNepal July 28, 2020 At 7:31 am

Send me your codes on Instagram because without seeing your codes it's hard to tell you the solutions.

Rex Junior August 5, 2020 At 12:40 pm

I want to know about these two things in script tag . Why and how did you use these?

Reply

Thomas August 5, 2020 At 12:40 pm

... when I delete: ul

from

.show + a, ul{

display: none;

}

everything is oK.

Reply

CodingNepal August 5, 2020 At 12:41 pm

Which two things?

Reply

Thomas August 5, 2020 At 12:42 pm

I have this issues too,
all li on the rest of the page are invisible.

NepReloaded September 16, 2020 At 9:46 am

why can't i select any text in liveserver.is there something wrong with css object
overlap .

BTW website works fine.

[Reply](#)

CodingNepal September 16, 2020 At 9:49 am

I've given user-select: none; inside * selector in the CSS file, so you can't select
any text. You can remove that line to select the text.

Hello. I have been checking the menu and when I switch to mobile, for some reason the button that opens the menu does not appear, so I have had to reload the page many times until the button is shown. How can I solve this problem?

Reply

Brian Cole April 27, 2021 At 4:50 pm

Great Navigation system, I am having one issue, when on Mobile the menu does not always appear. Happens randomly ? Any ideas as to why that happens?

Reply
